

# GRACE CONSULTING, INC.

## JOB SITE REQUIREMENTS

Four (4) inch inside diameter ports are adequate for the majority of the tests, however some test apparatus require up to a six (6) inch inside diameter test port. *If there are no existing sample ports or new ports need to be installed, GCI will assist with the sample port layout and the number of ports required.*

**GCI** Crew members require safe access to the test location.

Scaffolding or lifts should be provided prior to the arrival of the **GCI** test crew (if necessary).

Site accessibility by cargo vehicle for transportation of test equipment is appreciated.

Test Vehicle Power Requirements - Single phase, 220 volt 30 amp or 110 volts 20 amp, grounded electric service within approximately 50 feet of the sample location. (Differs by Mobile Lab)

Test Location Power Requirements – Two, 110 Volt 20 amp individual power circuits.
